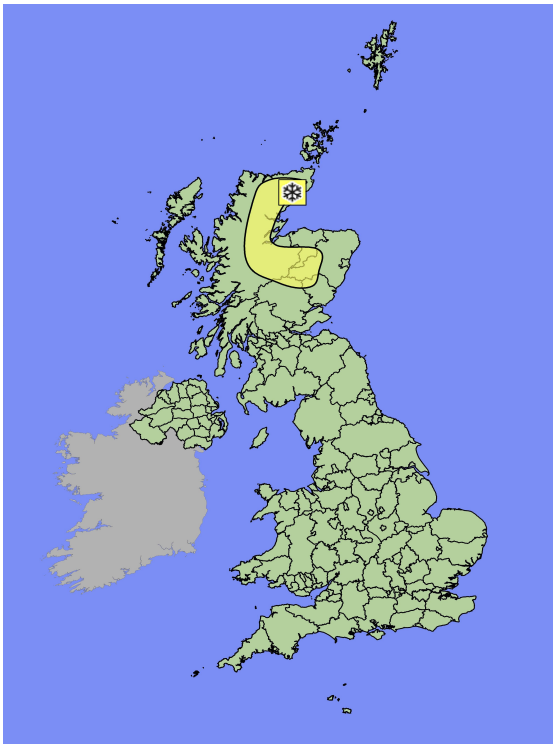
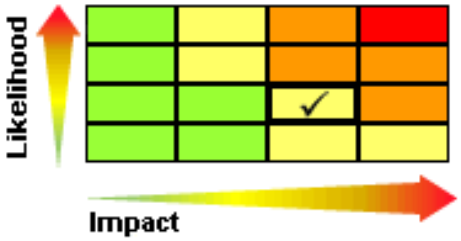
National Severe Weather Warning Service





Chief Forecasters Assessment
The complex frontal system which brought sleet, snow and ice to parts of the north and east of Britain last night, is becoming more confined to parts of Northern Scotland through today. Timing of clearance is rather uncertain, but it may produce a few cm of snow on the higher level routes, mostly above 400 metres elevation.

The Met Office have issued a **Yellow Warning** of **Snow**

Valid from **03:45 on Mon, 03rd Dec 2012** until **18:00 on Mon, 03rd Dec 2012**

Sleet and snow has now mostly turned to rain at low levels but further sleet or snow may affect higher routes at times into this afternoon. This warning update reflects the reduced area at risk through the rest of daylight hours.

The public should be aware of the risk of snow and icy stretches.
